© 2016, Trimble Inc. All rights reserved. Trimble, and the Globe & Triangle logo are trademarks of Trimble Inc. registered in the US Patent and Trademarks Office and in other countries. RealWorks is a registered trademark. Microsoft and Windows are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries. All other trademarks are the property of their respective owners.

#### **Release Notice**

This is the April 2016 release of the Trimble RealWorks Software Release Notes. It applies to version 10.1 of the Trimble RealWorks software.

The following limited warranties give you specific legal rights. You may have others, which vary from state/jurisdiction to state/jurisdiction.

#### **Software License, Limited Warranty**

This Trimble software product, whether provided as a standalone computer software product, built into hardware circuitry as firmware, embedded in flash memory, or stored on magnetic or other media, (the "Software") is licensed and not sold, and its use is governed by the terms of the relevant End User License Agreement ("EULA") included with the Software. In the absence of a separate EULA included with the Software providing different limited warranty terms, exclusions and limitations, the following terms and conditions shall apply. Trimble warrants that this Trimble Software product will substantially conform to Trimble's applicable published specifications for the Software for a period of ninety (90) days, starting from the date of delivery.

#### **Warranty Remedies**

Trimble's sole liability and your exclusive remedy under the warranties set forth above shall be, at Trimble's option, to repair or replace any Product or Software that fails to conform to such warranty ("Nonconforming Product") or refund the purchase price paid by you for any such Nonconforming Product, upon your return of any Nonconforming Product to Trimble in accordance with Trimble's standard return material authorization procedures.

#### **Warranty Exclusions and Disclaimer**

These warranties shall be applied only in the event and to the extent that (i) the Products and Software are properly and correctly installed, configured, interfaced, maintained, stored, and operated in accordance with Trimble's relevant operator's manual and specifications, and; (ii) the Products and Software are not modified or misused. The preceding warranties shall not apply to, and Trimble shall not be responsible for defects or performance problems resulting from (i) the combination or utilization of the Product or Software with hardware or software products, information, data, systems, interfaces or devices not made, supplied or specified by Trimble; (ii) the operation of the Product or Software under any specification other than, or in addition to, Trimble's standard specifications for its products; (iii) the unauthorized, installation, modification, or use of the

Product or Software; (iv) damage caused by accident, lightning or other electrical discharge, fresh or salt water immersion or spray; or (v) normal wear and tear on consumable parts (e.g., batteries). Trimble does not warrant or guarantee the results obtained through the use of the Product.

THE WARRANTIES ABOVE STATE TRIMBLE'S ENTIRE LIABILITY, AND YOUR EXCLUSIVE REMEDIES, RELATING TO PERFORMANCE OF THE PRODUCTS AND SOFTWARE. EXCEPT AS OTHERWISE EXPRESSLY PROVIDED HEREIN, THE PRODUCTS, SOFTWARE, AND ACCOMPANYING DOCUMENTATION AND MATERIALS ARE PROVIDED "AS IS" AND WITHOUT EXPRESS OR IMPLIED WARRANTY OF ANY KIND BY EITHER TRIMBLE NAVIGATION LIMITED OR ANYONE WHO HAS BEEN INVOLVED IN ITS CREATION, PRODUCTION, INSTALLATION, OR DISTRIBUTION INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, TITLE, AND NONINFRINGEMENT. THE STATED EXPRESS WARRANTIES ARE IN LIEU OF ALL OBLIGATIONS OR LIABILITIES ON THE PART OF TRIMBLE ARISING OUT OF, OR IN CONNECTION WITH, ANY PRODUCTS OR SOFTWARE. SOME STATES AND JURISDICTIONS DO NOT ALLOW LIMITATIONS ON DURATION OR THE EXCLUSION OF AN IMPLIED WARRANTY, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU. TRIMBLE NAVIGATION LIMITED IS NOT RESPONSIBLE FOR THE OPERATION OR FAILURE OF OPERATION OF GPS SATELLITES OR THE AVAILABILITY OF GPS SATELLITE SIGNALS.

#### **Limitation of Liability**

TRIMBLE'S ENTIRE LIABILITY UNDER ANY PROVISION HEREIN SHALL BE LIMITED TO THE AMOUNT PAID BY YOU FOR THE PRODUCT OR SOFTWARE LICENSE. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT SHALL TRIMBLE OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER UNDER ANY CIRCUMSTANCE OR LEGAL THEORY RELATING IN ANY WAY TO THE PRODUCTS, SOFTWARE AND ACCOMPANYING DOCUMENTATION AND MATERIALS, (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION, OR ANY OTHER PECUNIARY LOSS), REGARDLESS WHETHER TRIMBLE HAS BEEN ADVISED OF THE POSSIBILITY OF ANY SUCH LOSS AND REGARDLESS OF THE COURSE OF DEALING WHICH DEVELOPS OR HAS DEVELOPED BETWEEN YOU AND TRIMBLE. BECAUSE SOME STATES AND JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATION MAY NOT APPLY TO YOU. NOTE: THE ABOVE LIMITED WARRANTY PROVISIONS MAY NOT APPLY TO PRODUCTS OR SOFTWARE PURCHASED IN THE EUROPEAN UNION. PLEASE CONTACT YOUR TRIMBLE DEALER FOR APPLICABLE WARRANTY INFORMATION.

# Introduction

Trimble RealWorks (TRW) software is an integrated software suite for surveyors and engineers that takes advantage of point cloud data sets. Trimble RealWorks is full-featured software that enables you to visualize, explore, register and manipulate an as-built scene of point cloud data. It incorporates a set of useful tools and empowering functions that are particularly suited to civil survey, building, heritage, forensic, plant and other applications. It also allows surveyors and engineers to produce compelling 2D and 3D deliverables for direct output or export to AutoCAD® and MicroStation®.

Trimble RealWorks software is available in a selection of formats ranging from a base version, which includes standard registration and contouring functionalities, to a full function version including all editions. The software allows surveyors and engineers to offer enhanced deliverables in both 2D and 3D format, which clients can then, for example, visualize, manipulate, print, or partially edit.

With Trimble RealWorks Advanced, users have access to advanced registration features and can also leverage the powerful 2D/3D inspection tools as well as cross-section, ortho-projection and profiling features to produce compelling civil survey deliverables.

Trimble RealWorks Advanced-Modeler edition provides a fast and intuitive 3D modeling capability. It is particularly suited to civil engineering surveys and applications such as site refurbishments where modeled and textured structures enhance or complete the impact and scope of a surveyors' or engineers' final deliverable.

The Trimble RealWorks Advanced-Plant edition, which includes all modeling functions, provides powerful tools for various tasks specifically related to the power, process, plant and related environments.

The Trimble RealWorks Advanced-Tank edition includes all features included in Advanced-Plant plus additional tools specifically for the storage tank inspection and calibration market.

To further enable surveyors and engineers to communicate their results to clients and stakeholders, and to reach new levels of success, RealWorks offers its Publisher capability. With Publisher users can prepare self-contained packages that enable final clients, colleagues, and partners to visualize and explore projects in 2.5D, extract 3D information as well as measure and annotate. Trimble continues to also provide the RealWorks Viewer utility for visualization and analysis of 3D data with Trimble RWP files.

## System requirements

- Operating system: Microsoft® Windows® 7,8 and 8.1,10 - 64-bit
- Processor: minimum 2.8Ghz (Quad-Core) or higher, (additional cores with Hyper-Threading support strongly recommended)
- RAM: minimum 8GB (16GB and higher recommended)
- VGA card: OpenGL 3.2 compatible with minimum 1GB VRAM (3GB or higher recommended)
- 3-button mouse

### **Other requirements:**

Solid State Drive (SSD) for maximum performance (pref. 500GB) – strongly recommended.

# New Instrument Support

<i>New Instrument Support</i>			
Description	New or changes	Feature	Benefit /comments
<b>Trimble TX6/TX8</b>	New	Directly open RWP projects or TZF Scans with color information acquired using the newly released Trimble TX series scanners.	Enhanced productivity.
<b>Automatic colorization for Trimble TX6/TX8 data</b>	New	The new Trimble TX series scanners acquire color information. When accessing the TZF Scans, e.g. when extracting points or opening Scan Explorer, the TZF scans are automatically colorized. The color information is accurately matched to the scan points, and the application automatically detects the scan points that have to be colorized and the ones that should not (occlusion areas). High Dynamic Range images are processed to produce a single TZF Scan with reliable color information everywhere.	Enhanced productivity. Since the matching is run for every new TZF Scan, there is no need to re-service the instrument for camera calibration.
<b>New Trimble SX10 instrument support</b>	New	Manage the survey/scan/image data of the newly released Trimble SX10 instrument via the existing JOB / JXL file import.	Enhanced productivity. Survey and Scanning professionals can directly exploit the data from the Trimble SX10 using the existing workflows and tools.
<b>Registration with Trimble SX10 data</b>	New	Define stations in the field using survey methods then use the tools in Survey Workflow, e.g., Adjust Network; or use the instrument as a scanner in the field, then use the Scan-based Registration tools. You can even use Auto-register using planes (target-less) by first creating TZF scans: start TZF Scans>Create TZF Scan under the Edit tab.	Enhanced productivity. Benefit from the versatility of the Trimble SX10 instrument in Registration: survey professionals can use traditional conventional survey workflows; scanning professionals already familiar with Trimble RealWorks may use their favorite scan-based registration tools.
<b>Production tools with Trimble SX10 data</b>	New	Support for the Trimble SX10 instrument added to the Production tools. There are several tools in which the images can be used in Trimble RealWorks: e.g., once a plane is defined in Polyline Drawing, draw using the images directly in Station-based mode; create a Rectified Image; texturize a surface in Mesh Editing; share the colorized scan data by first doing	Produce deliverables using the scan and image data from the Trimble SX10 instrument.

Edit>Create TZF Scans, then  
Media>Publish.

<b>Registration</b>			
<b>Description</b>	<b>New or changes</b>	<b>Feature</b>	<b>Benefit /comments</b>
<b>Improved scan-based registration refinement</b>	Enh	The algorithm used to Refine in the Cloud-based Registration tool and when using the Refine Registration using scans command without TZF Scans has been improved. Scans are better aligned after the refinement process.	Data quality and accuracy.
<b>Cloud-based Registration tool: overlap information</b>	Enh	In the Cloud-based Registration tool, after a transform between the moving cloud and the reference cloud has been computed, the tool now shows the overlap percentage along with the RMS error to help with registration quality assessment.	Productivity. Identify faster if the registration is incorrect.
<b>Cloud-based Registration tool: display improvements</b>	Enh	In the Cloud-based Registration tool, both the Reference and Moving views now display scans following the main Cloud Rendering option, with red and green image borders, whereas the combined view always displays scans in red vs green. This way, identifying points to match in the separate views is easier.	Improved visualization, improved productivity.
<b>View-based 2D distance measurement</b>	New	In Registration, when using isometric projection mode, the measurement toolbar now offers a new option to directly measure 2D distances in the current view. Pick two positions on the screen; the tool shows the corresponding distance. The distance doesn't have to be vertical; the picked positions on the screen don't need to be scan points.	Enhanced productivity, data quality. Quickly check the registration quality by measuring shifts between scans in the current isometric view. This can also be useful to quickly get a rough idea of the size of an object.
<b>Cloud-based Registration tool: Registration visual check</b>	Enh	In the Cloud-based Registration tool, the Cutting Plane button has been replaced by the Registration Visual Check, which enables to inspect the registration quality using interactive slicing of the point clouds.	Improved productivity. Checking the quality of the registration is now easier and faster.

## Classification

Description	New or changes	Feature	Benefit /comments
<b>Automatic indoor floor extraction</b>	New	In the Sampling tool, a new option is now available: Extract Floor (Indoor). This option automatically segments the scan points corresponding to the lowest scanned floor inside a building. This option works like the Ground Extraction option. If you need to extract several floors, you can use the 'Add regions to floor' option and pick points on the upper floors to add them to the lowest floor; this will create a single point cloud with all floors combined. This tool can also be used for extracting man-made, quasi-flat, floors in outdoor environments.	Improved workflow, enhanced productivity. This is useful in particular as a first step before using - or from within - the Floor Flatness Inspection tool, to retrieve only the points on the floor, i.e., without the points on the walls or on the small objects that may lie on the floor. More generally, this tool can be useful when working with man-made indoor environments, from improved visualization, e.g., for key plan creation, to modeling using geometries.
<b>Improved performance in Auto-Classify Clouds</b>	Enh	The computation in the Auto-Classify Clouds command is now significantly faster, especially with massive datasets. On some datasets with one billion points, tests showed that the computation time was divided by two.	Enhanced productivity.

## Inspection

Description	New or changes	Feature	Benefit /comments
<b>Alignment stationing tool</b>	New	The Inspection tab now contains a new tool: Alignment Stationing. This tool enables you to define regularly spaced positions along a polyline. You may run this tool both on imported polylines and polylines created in RealWorks. Once the stationing for the alignment has been defined, you can then use it in the inspection tools to define the part of the alignment you want to compute an inspection map on. The tool creates a new polyline, of type 'Polyline - with stations'. The station information appears when looking at its properties.	Improved workflow. You can now define the orientation of a polyline and define positions on it.

<b>Inspection map of a specific part of an alignment</b>	Enh	You can now create tunnel projection-based inspection maps using only a part of the 3D path. In both the Surface-To-Model Inspection and Twin Surface Inspection tools, you can define the Start and the End positions of the inspection map you wish to compute. These positions can be defined by keying in a distance or by picking on the 3D path. If the polyline has stationing information - see point above -, then the stations are used to define the Start and End positions.	Improved workflow, enhanced productivity for road or tunnel applications. Only produce the inspection map on the needed part, but still work with the full alignment.
<b>Surface-to-model inspection: improvements for tunnels</b>	Enh	In the Surface-to-Model Inspection tool, when both the 3D path and the 2D shape are planar, i.e., defined/drawn on a plane, there is now a switch button to select which one to use as 3D path and which one to use as 2D shape.	Improved workflow.
<b>Orientation of cylindrical inspection map</b>	Enh	When using cylindrical projection, in both Surface-to-Model Inspection and Twin Surface Inspection tools, the inspection map orientation now adapts to the verticality of the cylinder axis, i.e., whether the cylinder axis is nearly vertical or not according to the current coordinate frame.	Improved workflow for storage tank inspection and tunnel inspection.

<b>Data Exchange</b>			
<b>Description</b>	<b>New or changes</b>	<b>Feature</b>	<b>Benefit /comments</b>
<b>Trimble Data Exchange (TDX) import</b>	New	Open a scan project registered in Trimble Business Center via the TDX import. The whole set of stations with their scans and images are transferred for further work in Trimble RealWorks.	Enhanced interoperability. Through the TDX import or export, the scans are kept in their original format, i.e., with no conversion cost.
<b>Trimble Data Exchange (TDX) export</b>	New	Export a scan project for further work in Trimble Business Center through TDX export. All stations with their scans are transferred for further work in Trimble Business Center.	Enhanced interoperability. Through the TDX import or export, the scans are kept in their original format, i.e., with no conversion cost.

## Visualization and Navigation

Description	New or changes	Feature	Benefit /comments
<b>Innovative Hide Background display mode</b>	New	Shape perception when visualizing point clouds has always been challenging, because of background points and foreground points shown interlaced on the screen. With the new Hide Background display mode, this is now made easier: the point cloud rendering engine automatically detects the foreground objects and hides the points that should be occluded by these objects. This way, only the scan points that should actually be visible from the current viewpoint are displayed.	Improved visualization and easier scene understanding. This display mode, unique to Trimble RealWorks, is useful in a number of situations, particularly when viewing indoor environments.
<b>Improved navigation in Scan Explorer's station view</b>	Enh	In the 3D view, when zooming, the view centers on the mouse cursor location. This is now true also in the Station view of the Scan Explorer window.	Improved navigation and productivity. Zoom in directly to the desired regions of interest.
<b>Station-based mode: image filter</b>	New	When visualizing data from the Trimble SX10 in Station-based mode, you can choose which type of images to display, between Overview, Primary or Telescope. Press the button at the far right of the Station-based view toolbar then tick the desired image type in the pop-up menu.	Improved visualization. Useful for Trimble SX10 data.
<b>Station-based mode: custom distance for images</b>	New	In Station-based mode, when viewing several images at the same time, some visual mismatches due to parallax may be seen on the images on the side. You can get a perfect visual match between the side images and 1. the central image and 2. the 3D data by setting the proper distance at which the images should be displayed. Key-in a value in the	Improved visualization. Useful for Trimble SX10 data.

new edit field of the Station-based view toolbar, or simply increase or decrease the distance using the + and - buttons.

<b>General</b>			
<b>Description</b>	<b>New or changes</b>	<b>Feature</b>	<b>Benefit /comments</b>
<b>Multi-point distance measurement</b>	New	The measurement toolbar now has a new option. Measure the cumulative distance over a series of 3D points.	Enhanced productivity. Useful for computing the overall distance along a path like a curb, a pipe or a powerline.
<b>Quick access toolbar management</b>	New	The quick access toolbar, i.e., the bar at the top of the application, is a way to efficiently access the commands and tools that you use most often. You just need to go to Customize Quick Access Toolbar>More Commands... and select the desired commands. In this version, it is now possible to share your customized toolbar, or to apply it again after the install of a new version of the software: simply export the customized toolbar to a QAT file by going to Support>Quick Access Toolbar>Export...	Enhanced productivity. Share common toolbar with your team for leveraging the best practices for your business.
<b>Easier deletion of multiple stations in Registration</b>	Enh	When deleting multiple stations at the same time, a single warning message is now shown.	Enhanced productivity.

## RESOLVED ISSUES

### General

- [3D DISPLAY] Random freeze on specific AMD graphics card (Firepro W5100)
- [3D DISPLAY] Random ghost points appearing with new AMD graphics card drivers
- [AUTOMATIC REGISTRATION USING PLANES] Crash on specific dataset
- [CLOUD TO CLOUD REGISTRATION] Different results depending on the stations selection order
- [POINT CLOUD REFINEMENT] Z axis is sometime inverted
- [POINT CLOUD REFINEMENT] Improved refinement of data not close to the instrument position
- [DWG EXPORT] Meshes not accurately exported in case of large coordinates
- [DWG EXPORT] Partial slices of Inspection Map not correctly exported
- [DWG EXPORT] Units not correctly taken into account for 1D inspection
- [PTX EXPORT] Point Cloud not accurately exported in case of very large coordinates, e.g., UTM

**END**
